Patient Name: MORGAN-DOG (DALAY-ON)
Requesting MD: N/A
Sending Clinic: #HPD BAGUIO
Clinical Data:
Specimen: Back mass
Collection Date: 04/07/2022
Procedure: Histopath Animal

Lab Number: 2236007975
Age: 9
Sex: F
Date Ordered: 04/21/2022
Specimen Received: 04/22/2022
Date Reported: 04/30/2022
No. of Slides: 2
No. of Cassettes: 2

SURGICAL PATHOLOGY REPORT

DIAGNOSIS: Back mass: Infiltrative lipoma with intralesional dermatitis and hemorrhage.

Gross Description:

The specimen is received in formalin fixative and labeled as "MASS (BACK AREA)" which consists of two (2), irregular, brown, doughy tissues measuring 4.0 x 2.0 x 1.0 cm and 2.5 x 2.0 x 1.0 cm. The margins are inked black. Sections show cream white to tan, solid cut surfaces. Representative sections are taken for study.

Microscopic Description

Within cut borders of submitted specimen, effacing the dermis, dissecting through and separating collagen bundles are sheets of well differentiated adipocytes supported by fibrovascular stroma. Foci of aggregates of inflammatory cells predominantly neutrophils, lymphocytes and few mast cells and hemorrhage within.
